

HEMAN SEEGOLAM

+447429564406

heman.seegolam@outlook.com

heman-s.github.io

SKILLS

Python / Java / JavaScript
HTML / XML / CSS / React
SQL / Splunk SPL
Github / Bitbucket / Jenkins
JIRA / Confluence
Machine Learning / Artificial
Intelligence

EDUCATION

UNIVERSITY (2021 - 2025) -

KING'S COLLEGE LONDON
BSc (Hons) Computer Science with
a Year in Industry

SECONDARY EDUCATION -

SOUTHEND HIGH GRAMMAR
SCHOOL FOR BOYS

A-LEVELS (2019 - 2021):

Maths A*; Computer Science A*;
French A; Economics B;

Further Maths AS A

GCESE (2014 - 2019):

Maths 9; Further Maths A*;
Combined Sciences 99; French 9;
English Literature 9;
English Language 8;
Computer Science 8; Electronics 7;
Art 6; Religious Studies 7

EXPERIENCE

BMW Group -

IT Service Delivery Analyst (November 2024 - Present, Remote)

Data Scientist Intern (July 2023 - September 2024, MINI Plant Oxford)

Collaborated with a global team to collect, clean, analyse and interpret complex vehicle and company telematics data.

Key Contributions:

- Administered and oversaw six applications ensuring robust functionality as per business requirements, including the monitoring and analysis of global production line, production quality, order demand, alerting and Rolls-Royce data.
- Designed, developed, optimised and delivered interactive dashboards using Splunk SPL, XML, HTML, CSS, and JavaScript, providing stakeholders with actionable insights through statistical and graphical data analysis.
- Ingested data to Splunk via SQL, Kafka and incorporated REST APIs to create self-service functionality of alerts and monitoring to stakeholders.
- Coordinated agile-driven projects, ensuring smooth workflow through JIRA, and directly liaising with internal stakeholders to define business requirements and present data-driven solutions.
- Prepared unit tests and technical documentation for dashboards and defect resolutions using Confluence, ensuring high standards of code quality and transparency.
- Deployed data solutions and automated pipelines using Bitbucket, Jenkins, and GitHub, improving deployment efficiency.
- Managed, led, and mentored team members, delegating tasks to individuals.
- Implemented business alerts to notify stakeholders of obscure, ongoing issues.
- Integrated machine learning algorithms to build predictive models for identifying potential upcoming issues, including predicting the availability of parts and storage for future orders in Plant Oxford, and predicting defects and rework minutes for Rolls-Royce orders.

This involved data pre-processing, feature engineering, the development of Linear Regression, Logistic Regression, Decision Tree Classification and Regression, Random Forest Classification and Regression, Gradient Boosting Classification and Regression models, etc. and hyper-parameter tuning, with Python, Pandas, NumPy, Scikit-Learn, and Splunk Machine Learning Toolkit.

PROJECTS

Optimising Architectural Space: A Reinforcement Learning Approach for Cost-Effective, Compliance-Aware Floor Plan Design from a Real Estate Perspective

Technologies: Python, PyTorch, Django, React

- Developed a web application that facilitates concise real-estate management (properties, rooms, occupants, statical analysis of cash flow, licenses, mortgages, prospective work, legal regulations), with a focus on using reinforcement learning (Proximal Policy Optimisation) in the context of floor plan design.
- Trained a reinforcement learning model with the aim of maximising space whilst minimising costs and adhering to relevant legal compliance and regulations within existing floor plans to maximise potential rental income.

Food Chain Simulator

Technologies: Java

- Collaborated in a team of two to build a multi-threaded, concurrent simulation of species' behaviour and interactions in a dynamic ecosystem, ensuring realistic interaction between predators and prey, with a flexible framework allowing for the addition of new species and behaviours, providing insights into ecological balance and predator-prey dynamics.
